Sabres Recognized at ACE Scholarship and Awards Ceremony

The SSPP High School **ACE Team** has gone through many months of rigorous research and careful planning in developing a new Denton Health Clinic. This was done through the support of the **ACE Mentor Program**, which allows students to combine their interests in the fields of architecture, construction, and engineering (ACE). Over the last several months, students located a building site for the clinic, designed the building from scratch, were taught how to look for and price building materials, develop cost estimates, incorporate green resources, and how to give proper presentations. During that time, the team also took a trip to a health facility that was under construction to get an idea of how much work really goes into planning a building and learning about the building codes and safety requirements that must be incorporated into construction projects. Congratulations to **Ben Payne '11** for winning the *Charles H. Thornton Scholarship*, and **Carter Saunders '13**, **Ben Hallett '13**, **Sam Cross '12**, **Dylan Peter '11**, and **Alex Schmitt '11** for being scholarship award recipients. **The Saints Peter and Paul High School ACE Team's project was also nominated out of the participating schools for national review!**
